

## DESPATCH LIST

### Vehicle Components (required for all installations):

Part Number / Description	IMAGE	QTY
80606-29 / WHUTELL-UTEMAIN-8 1.1		1x

### Load-Lid Components (only required if the Load-Lid does not have central locking pre-installed):

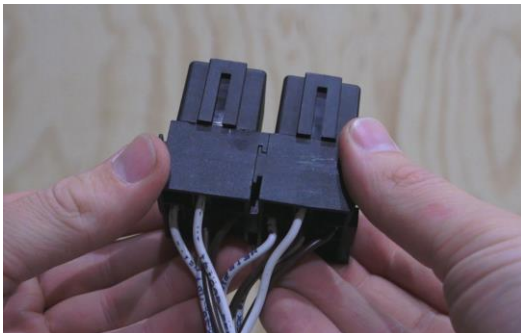

Part Number / Description	IMAGE	QTY
<b>Load-Lid Actuator Assembly</b> (1x PRT-003713, 1x PRT-003714, 1x 003611)		1x
<b>PRT-002878</b>		1x
<b>PRT-002879</b>		1x
<b>M6 x 12mm Button Head Bolt</b>		2x
<b>M6 Spring Washer</b>		2x

## Toyota Hilux 2015+ Load-Lid Central Locking Fitting Instructions

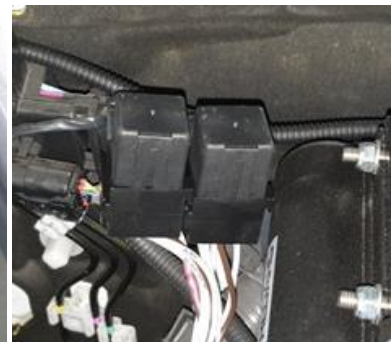

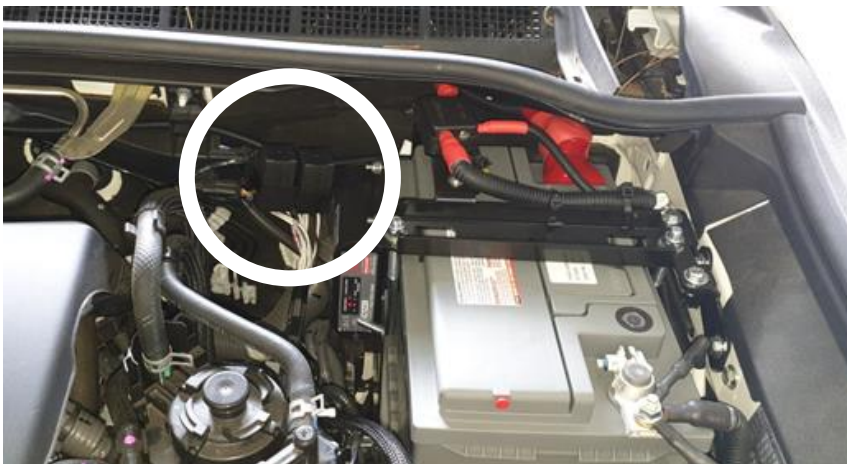

Thank you for purchasing a quality Utemaster™ product, our aim is providing you with as much assistance as possible throughout the fitting process. Please contact us if assistance is needed.

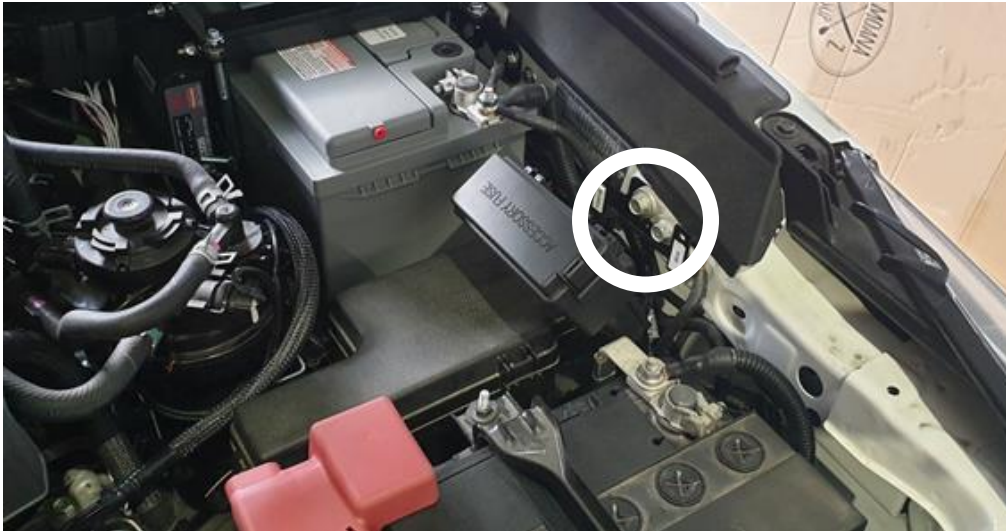

### Step 1) Connect the relays

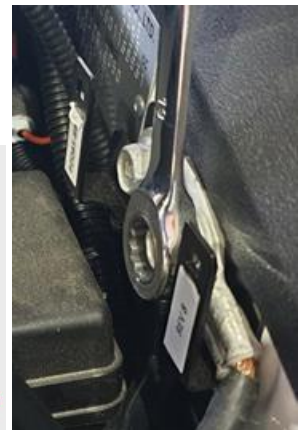

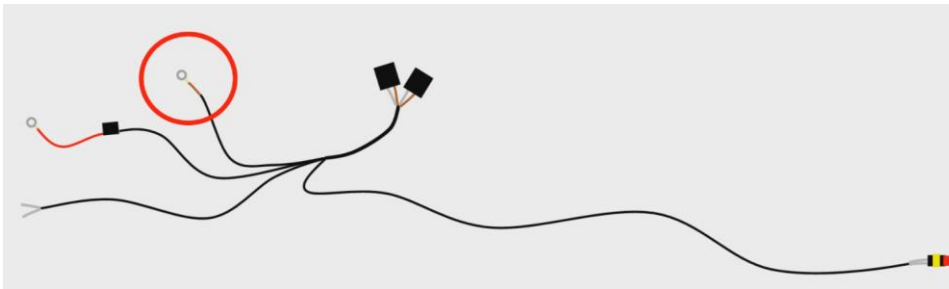

### Step 2) Cable tie the relays in place

**Step 3)** Remove the ground bolts (may need to move the accessory fuse box first)

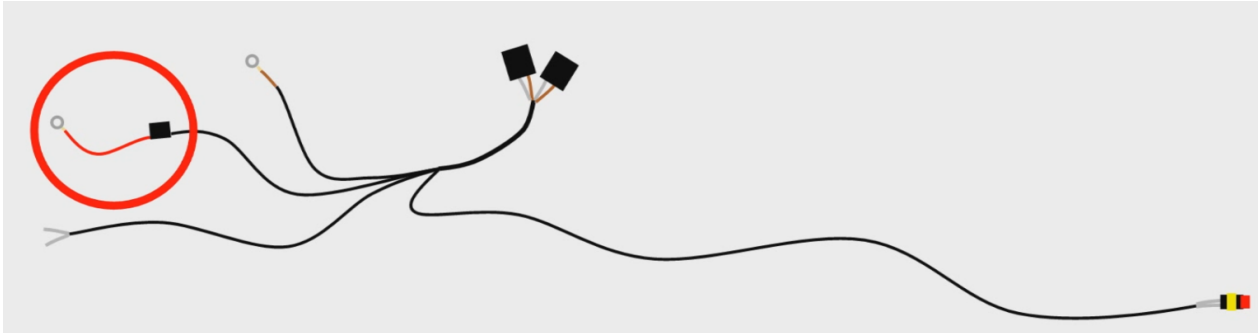

**Step 4)** Connect the ground cable to the ground point and re-install the bolt

**Step 5)** Open the battery cover and remove the nut shown

**Step 6)** Attach the power cable to the thread and re-install the nut. Close the battery cover

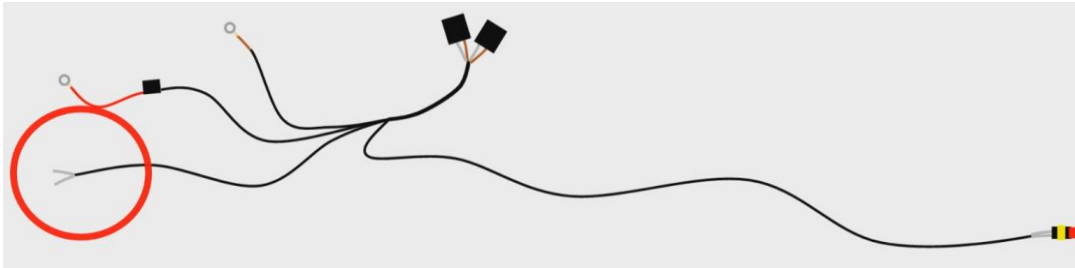

**Step 7)** Locate the cab entry point and make a small incision in it

**Step 8)** Push the Lock/Unlock cable through the incision into the cab interior

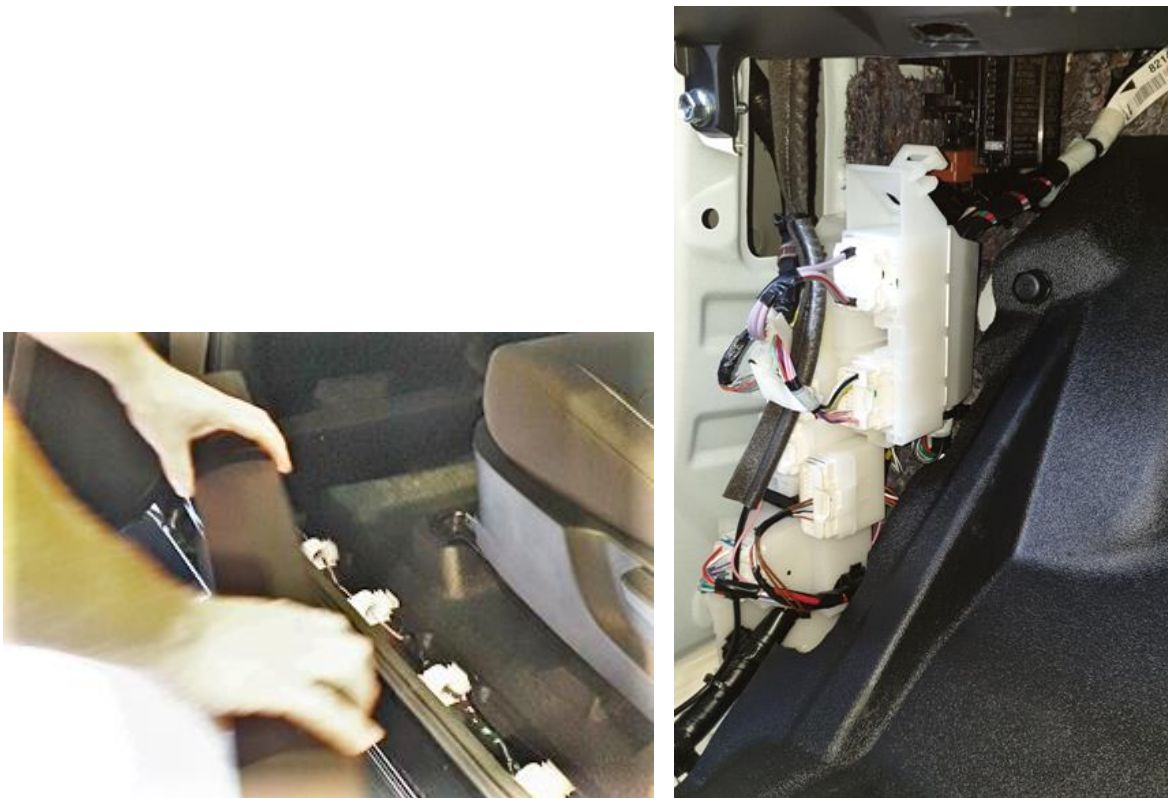

Once wire is through, add a dab of sealer to the incision made in the previous step.

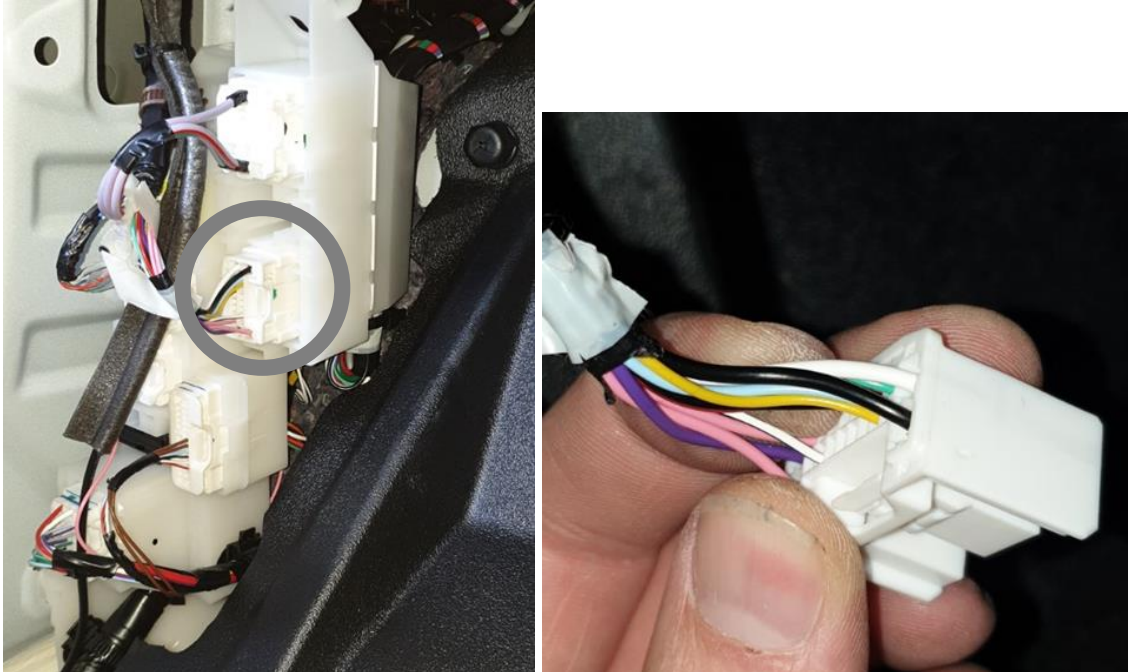

**Step 9)** Locate the cab entry point in the interior (will need to remove the plastic cap below the glove box). Pull the cable through

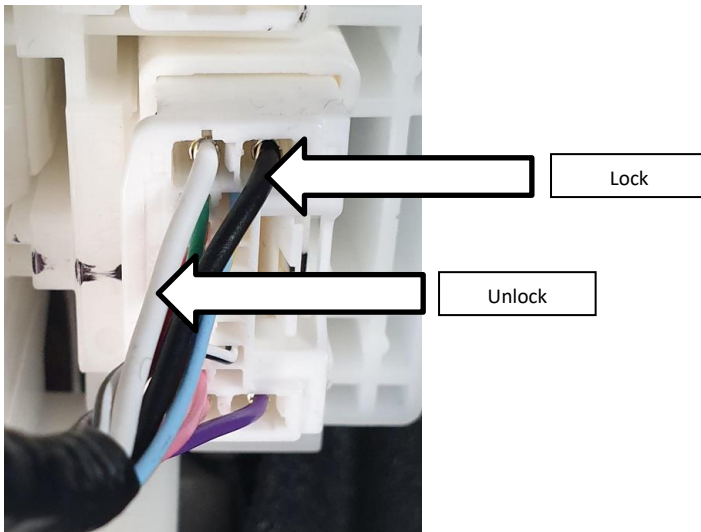

**Step 10)** Remove the plastic caps and rubber seal to expose the wiring behind the kick panel

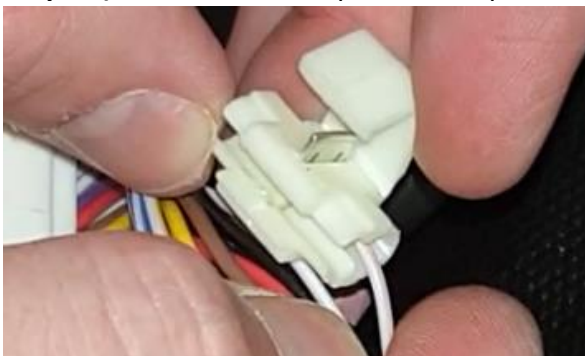

**Step 11)** Identify the plug shown (has one black and one white wire on top). Remove the plug and carefully cut back the wrapping to give more access to the individual wires

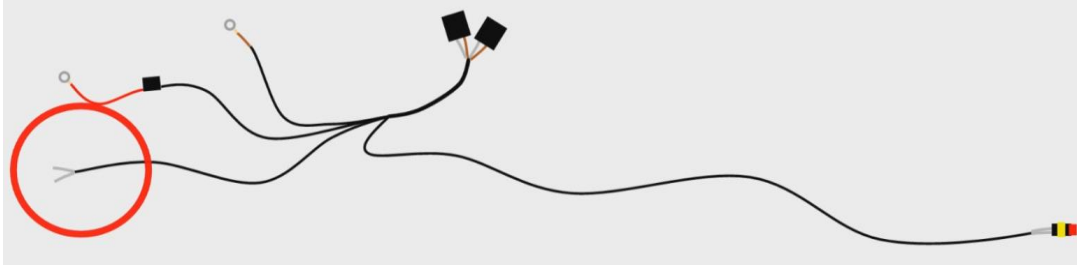

**Step 12)** Identify the black and white wires

**Step 13)** Place one of the provided clips over the white wire

**Step 14)** Identify the wire labelled 'Unlock\_Sig' and insert this into the plastic clip alongside the white wire

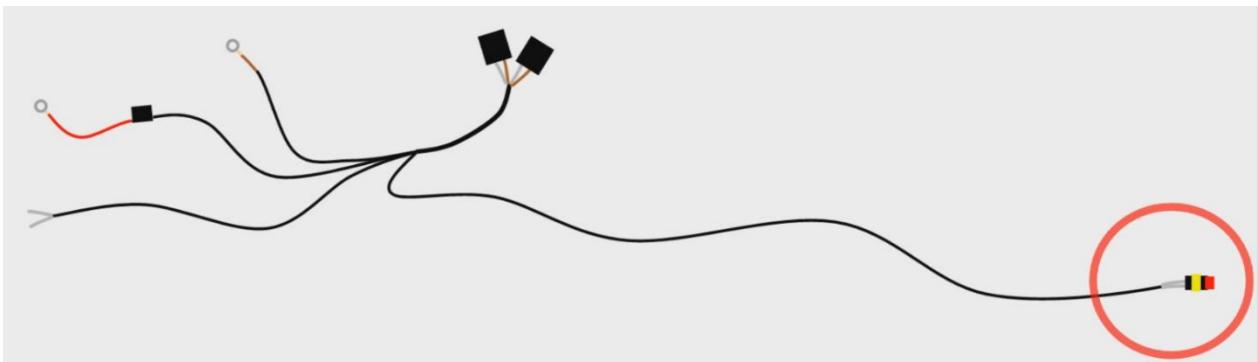

**Step 15)** Clamp the clip closed until the metal plate is no longer protruding, and close the clip

**Step 16)** Repeat Steps 13-15 to connect the wire labelled 'Lock\_Sig' to the Black wire

**Step 17)** Take the last cable remaining on the loom and feed it down through the bonnet cavity so it comes out underneath the vehicle

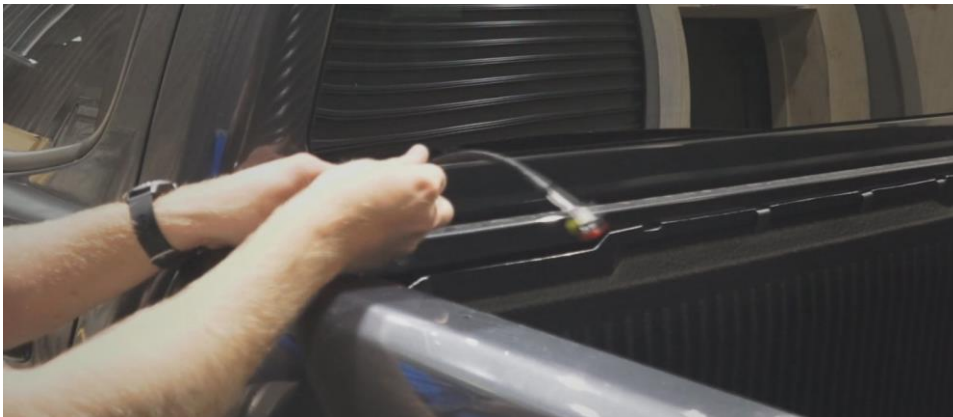

**Step 18)** Run down the length of the chassis and cable tie in place

**Step 19)** Pull up through the gap between the cab and wellside

**Step 20)** Install the Load-Lid as per fitting instructions provided

**Step 21)** Connect the vehicle wiring loom to the plug already installed in the Load-Lid

Your central locking is now fully fitted and ready to use.  
Thank you again for using Utemaster™ and don't forget to keep checking our website for our latest innovations!
